Vincent Le Quang

Game & interface designer who ships · the engineer on the other side of the handoff

San Mateo, California
jacklehamster@gmail.com · linkedin.com/in/vincentlequang
jacklehamster.itch.io · github.com/jacklehamster

I design games people can read in one glance, then I build them end to end: interface, levels, art, animation, music and code. Thirteen years and about sixty releases, three on Steam. Looking to move from implementing Figma handoffs to designing them.

SELECTED DESIGN WORK · DOBUKI STUDIO, 2013 – PRESENT

2024 — *The Supernatural Power Troll* · puzzle platformer · GameDev.js Jam → Steam

- Fifty levels on one readable sentence: one key, one door, one exit; fruit is the only safe way to touch a human.
- NPCs assembled from drawn parts with generated, spoken, always-subtitled dialogue, shown only on events.
- In-game level editor that exposes only platforms, items and humans; community levels one click from the menu. 63 Aseprite sources, music and sound, all mine; listed on Kotaku.

2011 → 2023 — *World of Turtle* · Sokoban puzzle · BASIC → Flash → TypeScript / WebGL on Steam and Google Play

- Same rules rebuilt three times; the interface changed every time: ASCII to sprites, mouse to touch and gamepad.
- Ten stages of ten levels on one screen; every new element taught in the world, no tutorial screens; skip passes instead of lives.
- English, French and Korean with full audio; one-column menus sized for thumb, stick and mouse.

2014 — *Blink Pong · Darwin Gator* · accessibility games · LowRezJam, AccessibilityJam · App Store, Google Play

- A pong played with eyes closed (the ball is where the sound is) and a full platformer on a single button.
- Vision, cognition and motor load each reduced to one thing; sound and timing designed before pixels.

2013 → 2023 — *~60 more* · Dobuki's Epic Journey (Steam), The Terror of Mongolia (js13kgames, 12th place), the Dobuki Game Anthology launcher, jams

EXPERIENCE

2025 – — **Staff Software Engineer** · Skydio, San Mateo
Remote Flight Deck, the web cockpit that pilots a drone from miles away. Turns Figma handoffs into shipped UI (notifications, controller-matched keyboard bindings, sensor controls) with Storybook, Chromatic and Axe.

2018 – 2023 — **Senior Software Engineer** · Amazon, Lab126 (Astro) and AWS GameLift
Led Astro's eyes animation engine and the UX research prototypes around it; cut animation storage by 90 %; mentored two engineers to promotion.

2016 – 2018 — **Software Engineer** · Thumbtack
Growth and UX experiments; led globalization to every language (best hackathon project).

2015 – 2016 — **Staff Engineer** · Storm8
Casual mobile games in Unity; led a team of ten to a first-prize claymation game.

2011 – 2015 — **Computer Scientist** · Adobe
Led a small team on the AEM Communities iPad app; shipped Adobe Connect features.

2007 – 2011 — **Game Developer** · K-Factor Media; Siemens / Microsoft Kidtab (contract)

DESIGN

Level design · Game UI · Pixel art · Aseprite · Animation · Music · Beepbox · Sound · ZZFX · Accessibility · Localization EN / FR / KO · Cutscenes & story · Figma · leveling up, AI in the loop

BUILD

TypeScript · React · WebGL · Phaser · Unity · Storybook · Chromatic · Axe · Electron

EDUCATION

2008-09 — **Academy of Art University**
Graduate studies, 3D animation

2007-08 — **Seattle Film Institute**
Certification in filmmaking; editing

1998-00 — **UC Irvine**
BS, Computer Science; ACM contest

1996-98 — **Santa Ana College**
AS, Computer Science; Phi Beta Kappa
